

## BOOKS

We have compiled this catalogue of BOOKS to help parents, lawmakers, medical practitioners and scientists understand several important points about the vaccine issue:

- there is abundant science published in peer reviewed medical and scientific journals suggesting cause for concern about the safety of vaccines;
- the vaccine debate is not a debate between parents and doctors but rather amongst scientists with opposing views;
- vaccines may be linked to a host of chronic illnesses and conditions such as asthma, allergies, learning disabilities, behavioral problems, autism, unexplained infant death and autoimmune diseases such as diabetes, rheumatoid arthritis, lupus, MS, and others;
- there are connections between the gut, immune, and neurological issues often seen in vaccine injuries.

There are two lists of BOOKS: one list provides the conventional perspective on vaccines and another list that provides perspectives concerning vaccine safety, awareness and freedom issues that challenge the conventional perspective. Neither list is exhaustive but rather provides a flavor of what is out there to digest as you work your way through your own personal decisions and *Think Again!*

### **Vaccine Safety, Awareness and Rights Issues**

A Shot in the Dark, Barbara Loe Fisher  
Vaccine Epidemic, Louise Habakus and Mary Holland
